

CHILDREN'S GAME

Abstract of the Disclosure

A children's game comprising a plurality of game tiles is provided. According to one preferred embodiment, each tile is substantially identical. Each tile includes a design on a first face and a design on a second face that is substantially identical to the design on the first face, but comprises a reverse color scheme. According to one preferred embodiment, the design comprises an arc that intersects opposite corners of a square tile. A first side of the arc defines a first color and a second side of the arc defines a second color. A method of arranging the tiles to form geometric shapes and spatial relationships is also provided.
